

Import From FrameMaker

Follow these steps to import FrameMaker pages into ProPorfs.

1. Create a new folder on your computer called **Import**.
2. In FrameMaker, select **File**, then **Open**. Then open the FrameMaker file you want.
3. Select **File**, then **Save As**, then **HTML**.
4. Select the save folder called **Import** that you just created, and then click **Save**.
5. Locate the files on your computer. Select all the files you want to zip. Right-click on any of the files (making sure all the files are still selected), select **Send To**, and another box will open. Click **Compressed (zipped) Folder**. A new folder with a zipper image on it will appear in the same general area (i.e., the desktop or folder in which the original item was saved). This is your new zip file/folder.
6. [Follow these steps](#) to begin the import process.
